# Facts to 10 loop game.

Suitable to play in small groups. Up to 9 players.

One student starts by reading out their question first e.g.

Student 1: "What is  $2 + 2$ ?"

The students will check their answer section. The student that has 4 in their answer question will call out the answer and then read their question. This will continue until all cards have been used.

I recommend laminating the cards to keep for future use.
